DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Species I, figure 2A in Paper No. 17 is acknowledged.

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2826

4. Claims 1-4, 8, 28, 30-33, 35-43, and 45-46 are being rejected under 35 U.S.C. 103(a) as being unpatentable over Haung et al. (U.S. Patent # 6,414,385), in view of Hung et al. (U.S. Patent # 6,476,474).

As to claims 1, 28, and 38 Huang et al. shows, in figure 7, a plurality of horizontal leads 326. There is a first chip 310 having input/output pads. A second chip 304 having input/output pads. The input/output pads of the second chip 304 is electrically connected to the first side of the leads. There is a package body formed of a hardened encapsulating material 332. The encapsulant covers at least portions of the chips and at least a portion of the second side of the leads. Huang et al. fails to explicitly show superimposed input/output pads.

Hung is cited for showing a dual-die package structure and method. Specifically, Hung shows superimposed input/output pads. It would have been obvious to one of ordinary skill in the art to use the superimposed I/O pads of Hung with the device of Huang et al. for the purpose of providing a better electrical connection.

As to claims 2-4, 33, 35, 37, 39-41 and 46, Huang et al. shows the second side of each lead including a recessed horizontal surface at the inner end of the lead. The recessed horizontal surface is covered by the encapsulant. The second side of the leads are exposed at the first exterior surface collectively forms rows and columns. The first chip is in a horizontal plane with the leads in the central region.

As to claims 8, 31, 32, and 42-43. It is a matter of designer's choice as to whether or not they are electrically coupled by a reflowed metal ball or an anisotropic conductive film. The operation of the device will not be altered.

Art Unit: 2826

As to claims 30, 36 and 45, the I/O pads over the first side of the leads are electrically connected to the first side of the lead by a wire bond.

Claim Objections

5. Claims 11, 34, and 44 are being objected to as being dependent upon a rejected base claim.
